SAP® Certified
Integration with SAP S/4HANA®

About XFT Document Composer

Create, Approve, and Edit Word and Excel Documents Directly in Your SAP System

Even if your company relies solely on SAP, you frequently reach the limits of your system and must switch to other applications. This often occurs if you prefer to write new text documents with Microsoft Word, work on spreadsheets with Excel, or fill out interactive forms with a separate PDF tool. How much time could you save if you were able to avoid switching from system to system – without missing out on the convenient functions that you are used to?

XFT Document Composer enables you to create documents directly in your SAP applications – supported by processes and automated to a high level. Processing and filing take place in your secure SAP process environment. As an editor, you are still able to use Word and Excel with a comprehensive template library. This helps you work faster and guarantees you conform with your own corporate identity.

Overview of Features

Document Creation

- Workplace
 - Central access to document creation
 - Search for documents
- SAP GUI and SAPUI5 can be used as the front-end client
- Creation of serial letters
- Dialog data can be entered
